

DIGIPLEXI and DIGIMINI

Description

DIGIPLEXI is the evolution of the protection system that prevents fingers from being pinched on a door's hinge. It can be applied on the hinge side of all types of doors and gates and is the ideal product to ensure safety at home or in public places such as hotels, hospitals, public offices, kindergartens and schools where aesthetics need to match safety.

Understated and elegant it is made of a transparent polycarbonate body (UV resistant), framed with aluminium profiles which are part of the mechanical movement which allows the door to open up to 120° covering totally the shear point between the door and the frame.

DIGIMINI seals the gap on the hinge side of the door, aligning with the hinge pin.

Fixing

The system is easily installed in minutes and includes hidden fixings.
Suitable for single swing butt hinged doors only.

Material and Finish

Body in transparent polycarbonate, anodized aluminium frame with stainless steel finishing.

Available As

2000mm length as standard. Other lengths are available.
